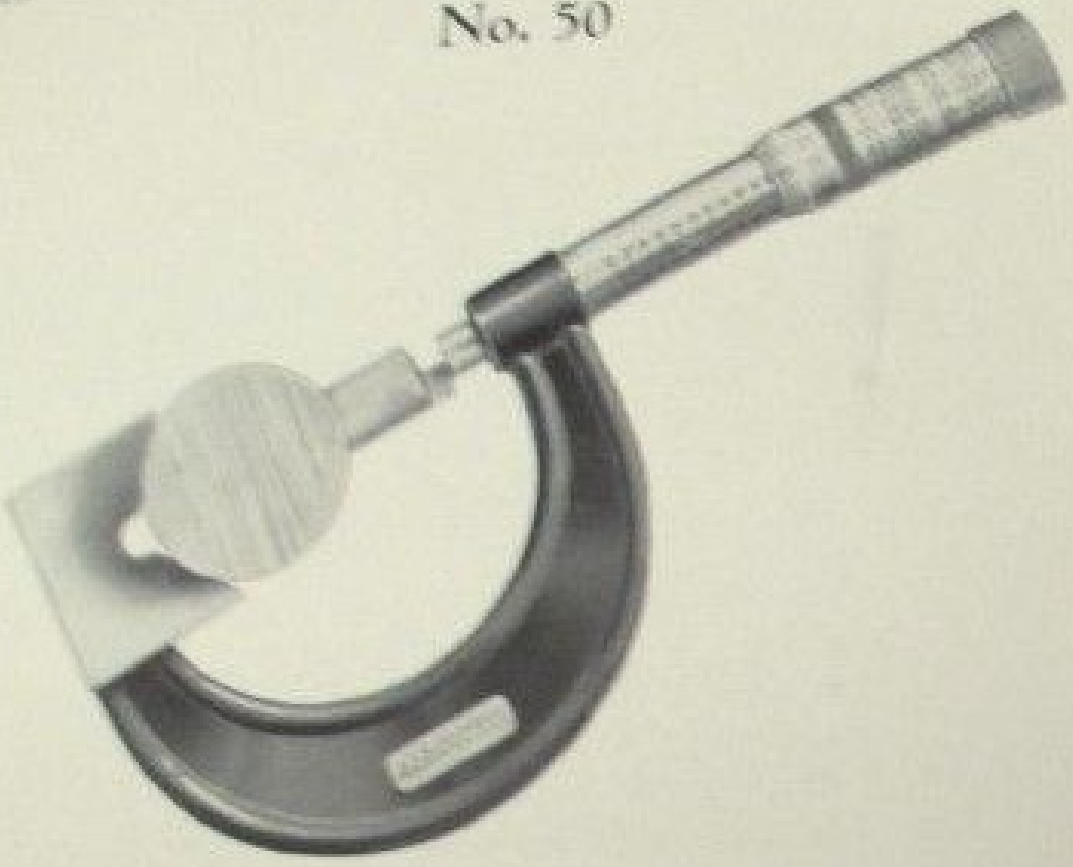
No. 50



A Direct Reading Micrometer

This Micrometer gives correct measurement of fly tool before boring, thus preventing guess-work.

The tool reads direct—i. e., if the fly tool is raised .0005, the bar will bore a hole .001 larger. This is compensated for by having the thimble graduated in thousandths for each .0005.

The use of the Slocomb No. 50 eliminates waste and loss of time by enabling the operator to set the fly tool of a boring bar to a predetermined size.

When ordering, specify the exact diameter of boring bar to be used.

Price $13.00

No. 23

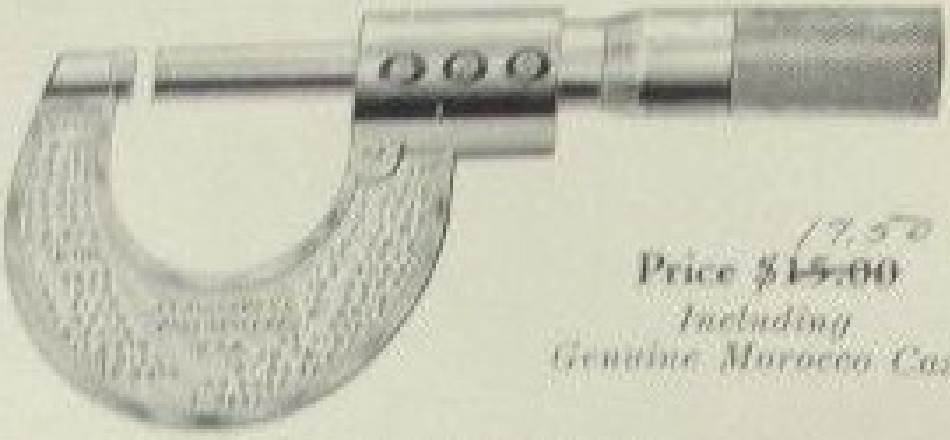
0 to 4 Inches

Each micrometer is graduated to read to thousandths of an inch, although they can, when so ordered, be graduated to ten thousandths of an inch, at an extra list of $1.75 for each micrometer, or $7.00 per set. Furnished in a handsome, substantial case, covered with Morocco leather and velvet lined.

These are regularly sent without Friction Stops and Lock Nuts.

Price

As shown	$33.25
With friction stop	35.25



Price $15.00
Including
Genuine Morocco Case

You Read It Direct

TIME SAVED, calculating saved, measurements made more easily, for there is less chance of error. A simple, compact combination of a well-known and thoroughly tested counting device with the Slocomb Micrometer, which is world famed for accuracy and wearing qualities.

We invite unprejudiced trial by machinists, who use micrometers continually. The Davenport Slocomb Direct Reading Micrometer will be found to read direct with perfect accuracy to thousandths of an inch—light in weight, splendidly finished and nicely balanced.

No. 45

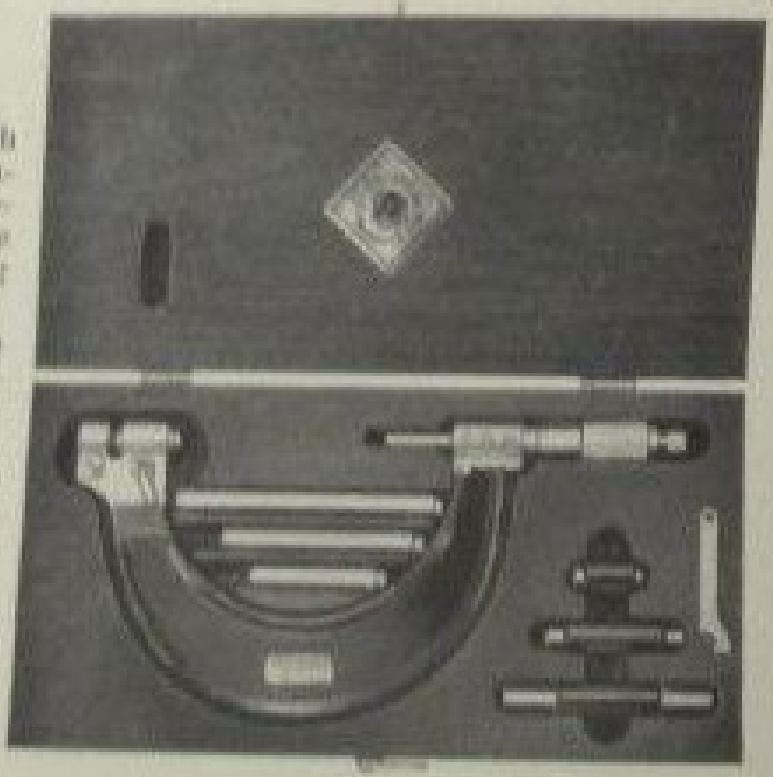
0 to 4 Inches

This micrometer with range from 0 to 4" inclusive, is especially designed for automotive repair and regrinding work.

This set consists of one Direct Reading Micrometer, four interchangeable anvils, giving measurements from 0-4" by .001, and three end measures for checking purposes.

Price complete with friction stop in hard wood case

$27.00



No. 19
